STEP 6

The Key operated safe lock; Key Op from Sargent & Greenleaf is another of a family of fine lock products designed to add value and convenience.

The lock is changeable which means you can change it to take different keys ... whenever you want to "re-key" the lock. All you need is the Allen wrench and a new key.

The lock is as secure as those found in safe depositories and has earned the UL label and certification.

The lock is Sargent & Greenleaf's answer to the changing security and convenience needs of today's world. It offers far better security than a mere pin tumbler lock often used in these applications ... in fact, it offers as much resistance to a skilled manipulator as a good UL Group 2 combination lock. Key Op does all this at a cost you can afford. It is at the same time extremely rugged and simple. You've purchased a trouble free and easy to use lock which is one of the latest from a long line that have been produced for over a century and a quarter by Sargent & Greenleaf.

To set your Key Op to a new key, follow these directions.
